

KITE · results at a glance

Every number is read on held-out human experiments, with the criteria frozen before the results were read.

A EPSTEIN 2021 · HELD OUT

-41% Intervention-effect error
kernel → hybrid, ten within-wave effects

Kernel - hybrid **+0.0125** [$+0.0064$, $+0.0167$], participant bootstrap · 9,070 people · 1,080 paired anchors = 1.7% of states

B SOCSCI210 · 37 UNSEEN EXPERIMENTS

+0.12 Captured decision gain
0.27 → 0.39 for the hybrid

Hybrid - kernel **+0.119** [$+0.014$, $+0.224$], study bootstrap · flagship calls for 1-3 personas per task

C ERROR PROPAGATION · 91 SEEN → 37 UNSEEN STUDIES

96% Coverage of nominal 90% intervals
sampling error alone: 36%

People's effect = $\beta \cdot \text{model effect} + \text{study term} + \text{condition term}$ (β 0.925, τ 0.037, σ 0.080), read on 532 held-out effects

D TABULATED EXECUTION · ONE LAPTOP

0.90 s 10^6 agents × 20 steps
run from the state table

New kernel predictions: **\$0.023** per 1,000 · 500 people × 20 cards × 2 conditions = 20,000 fresh states for \$0.32
